Links

- HTML links are created using the **anchor tag** (<a>);
- The element that is clicked to trigger the link must be eclosed by the opening and closing anchor tags.
- An href attribute is required with a path to the link.
  - `<a href="http://www.google.com">click me</a>`
- The example above will take you to another website. Notice the http protocol is included. This is required if linking to an external website.
- When linking to a file on the same web server as the current html file, a path to the file should be used instead.
  - `<a href="myPDFfile.pdf">click me</a>`
- When linking to an element on the current page, use the element's **ID**.
  - `<a href="#section2">click me</a>`
